English - Professional Working Proficiency

Japanese - Beginner

Some Of My Projects

I always involved the projects from the start. That's why, I'm very experienced about the whole process.

*Note: **Poshta** and **ICE** companies are the same companies but different names*

PRESENT

NOV 2022

WIP

Gaboras - Real Estate Market

Gaboras offers you a secure and reliable real estate platform.
On this platform you can quickly and securely buy/sell/rent real estate, open an auction or participate in an auction.

AUG 2022

DONE

VPN Flare - Secure & Fast VPN

VPNFlare was the side project that we work in ICE company.
I was responsible for building the app using Flutter.

APR 2022

SUSPENDED (Financial problems)

Ice - E-commerce App

After Poshta, Company decided to move Germany and continue there with a different project named ICE. I was responsible for building the app using Flutter. It was almost finished project but beacause of the financial problems, project suspended as well.

SEP 2021

SUSPENDED (Ukraine Invasion)

Poshta UA (ПОШТА УА) - A Cargo Company at Ukraine

There was 3 main apps that we're working on.

- App for Customers → call a courier home to send cargo, track the cargo, etc.
- App For Delivery Guys → Call customers, manage the day and cargos, etc.
- In-house App For Internal Usage → Shifts, Announcements, etc.

I was responsible for maintaining the current projects and adding new features like, performance optimizations, real-time delivery tracking on map, scanning/generating barcodes, real-time chat, VoIP calls, Auth with OTP/NFC/Social/Email, and so on.

Because to the Ukraine Invasion, we had to stop our operations and move forward with the ICE project.

DONE

Kudamono - Digital QR Menu App Platform

Kudamono was my personal startup project that I launched. I was responsible for everything from Design to Production. Even if It was a successful app, It didn't succeed because of lack of Marketing.

Basically my stack was like that:
- Figma For UI/UX Design
- HTML/CSS for Website Design
- VueJS/NuxtJS for QR Menu App
- Flutter for Console & Admin Apps
- NodeJS & MongoDB for backend
- Firebase for Notifications, Analytics, Auth, Crashlytics.. .

DONE

Baby Photo - A Photo Editor App For Parents

I was responsible for both design & code. I used Figma for design and Flutter for the apps.
That was pretty challenging app because We had to use some advanced concept together.

Such as;
- Nested Bottombar with layers and different concepts
- Undo/Redo system
- Image manipulating and optimizations
- Adding customizable stickers and texts on the image
- Collage photos and pre-made templates

DONE

Zarta - Multiplayer Trivia Game

I was responsible for design, backend, and frontend.
My main responsibility was the visual side. but I also involved the backend side.

Here are some of features that I involved in.
- Advanced design and animations
- Customized notifications
- Dynamic link
- Matching system
- Realtime chat
